

ABSTRACT OF THE DISCLOSURE

A coffee maker 1 capable of being used normally and conveniently during use and downsized when not in use to provide working space, comprises a coffee maker body 2 equipped with an apparatus for brewing coffee, a holder 4 capable of mounting a coffee server 5, and folding arms 3 having plural arms 21, 22 linked to form a set of arms and connected revolvably between the coffee maker body 2 and the holder 4. The coffee server 5 can be mounted on the holder 4 when the arms 3 are extended. When the coffee maker 1 is not used, the holder 4 is elevated and folded to make space for other purposes. A lock mechanism can be provided to unlockably lock the elevated holder 4 to the body 2.
